Notes:

This is a general guide and should not be the sole means of selecting or rejecting this material. ASTM test results in accordance with ASTM F-104; properties based on 1.5mm sheet thickness unless otherwise mentioned.

* Values do not constitute specification Limits

[1] See Garlock chemical resistance guide.

[2] Based on ANSI RF flanges at our preferred torque. When approaching maximum pressure, continuous operating temperature, minimum temperature or 50% of maximum PxT, consult Garlock Applications Engineering. Minimum temperature rating is conservative.

NOTE: Minimum recommended assembly stress = 3,600psi (25 N/mm2). Preferred assembly stress = 6,000-10,000psi (41-69 N/mm2). Gasket thickness of 1.5mm strongly preferred. Retorque the bolts/studs prior to pressurizing the assembly.
